LUNCH & LEARN

Designing Green & Healthy Built Environments with Natural Wood Flooring

This lecture is accredited for 1 or 2 LU/HSWs.

This course explores how incorporating sustainable hardwoods into biophilic design enhances the built environment. The course covers the role of natural wood in carbon sequestration and the benefits of manufacturing without harmful chemicals. Participants will gain an understanding of how natural wood improves indoor air quality, overall health, better sleep, and stress reduction.

Learning Obectives:

a) Understand the role of hardwoods in biophilic design and its effect on the health and welfare of those who occupy our built spaces.

b) Understand the importance of wood flooring certification using the highest standards for sustainability and ecological biodiversity.

c) Discuss how natural wood floors can be easily maintained without the use of plastic finishes that can contain hazardous chemicals.

d) Explain how natural wood flooring sequesters carbon for generations to come.

e) Explain the basics of wood movement and how appropriate installation and humidity determine the lifespan of nature.
