LUNCH & LEARN

Wood Flooring Fundamentals for Design Professionals

This lecture is accredited for 1 or 2 LU/HSWs.

This foundational course introduces architects and interior designers to the essential elements of specifying wood flooring. Participants will gain a clear understanding of wood flooring construction, species, finishes, and installation methods to make informed decisions early in the design process.

Learning Obectives:

a) Define the key differences between solid and engineered wood flooring, including composition and applications.

b) Identify common wood species used in flooring and their aesthetic and performance characteristics.

c) Describe primary installation methods and their relationship to subfloor type and project scope.

d) Compare finish types (oil vs. polyurethane) with respect to maintenance and visual appeal.
